

Post-doctoral fellowship/Research associate position

GHG research in Canadian Reservoirs

A Post-doctoral/Research Associate position (depending on experience) is available to participate in a newly funded NSERC project on GHG dynamics in Canadian reservoirs led by Yves Prairie, Paul del Giorgio (both at UQAM) and Tonya DelSontro (U. Waterloo) in collaboration with several partners. This project, spanning over three years, will involve both field work across multiple sites and numerical modelling. Candidates with research experience on the biogeochemistry of greenhouse gases in aquatic systems and with strong quantitative and programming skills are particularly encouraged to apply, but a strong desire to learn and work within a network of students and partners is also important. The successful candidate will be based at UQAM in Montreal but will be expected to travel occasionally to field sites across Canada.

Interested candidates are encouraged to send applications (letter of interest, CV and the names of two references) to Yves Prairie (prairie.yves@uqam.ca).
